

OVERVIEW

AI Researcher with expertise in generative AI (LLMs), self-supervised representation learning, and multi-agent systems. Experienced in designing data-driven solutions to real-world problems and translating research into applied solutions. Published in venues including ACL, IJHCI, IEEE-TCSS, and AI & Society. Visit my [Webpage](#) or [Google Scholar](#) for more info.

EDUCATION

- Doctor of Philosophy (PhD) in Computer Science** • CGPA - **4.0/4** March 2025
 North Carolina State University, Raleigh, NC (advisor: Distinguished Prof [Munindar P. Singh](#))
 Dissertation: [News, Networks, and Narratives: Language Models and Social Simulations](#)
- Master of Science in Computer Science** • CGPA - **4.0/4** May 2019
 North Carolina State University, Raleigh, NC (advisor: [Dr. Collin F. Lynch](#))
 Thesis: [Prioritizing Online Discussion Forum Posts Using Linguistic Features With Limited Labelled Instances](#)
- Bachelor of Engineering in Information Science** • CGPA - **8.8/10** May 2015
 PES University, Bangalore, India

PROFESSIONAL EXPERIENCE

- Data Scientist III - LexisNexis (Nexis + AI), Raleigh** April 2025 - Present
- Built a DeepEval-powered RAG evaluation framework using LLM-as-a-judge that provides real-time evaluation of the retrieval and answer generation quality, providing observability and actionable insights for data-driven optimization.
 - Designed and implemented a scalable, homonym-aware entity deduplication system using semantic entity graphs, increasing NER entity coverage from 100K to ~2M entities while preserving high-precision entity disambiguation.
- Summer Research Scholar at SCADs - Laboratory of Analytic Sciences (LAS), Raleigh** June 2024 - July 2024
- Developed a multi-agent LLM-based abstractive summarizer and used LLM-as-a-judge for scalable evaluation.
 - Demonstrated that ensembles of smaller LLMs outperform larger models in generating more balanced summaries.
- Machine Learning Summer Intern - Coupang, Mountain View** May 2022 - Aug 2022
- Identified and eliminated spurious features in DCN v2 ranking model, reducing model complexity and inference cost
 - Built a reusable experimentation framework that improved reproducibility and reduced experiment setup time.
- Machine Learning Summer Intern - Seagate, Longmont** May 2020 - Aug 2020
- Designed an unsupervised, graph-based multi-document abstractive summarizer for a social listening app.
 - Built an unsupervised aspect-based sentiment analyzer to compare sentiments across online user reviews.
- Member of Technical Staff - Oracle, Bangalore** July 2015 - June 2017
- Designed and deployed testing modules for Service Deployment Infrastructure (SDI) for Oracle Public Cloud (OPC).
 - Designed and implemented reusable, scalable virtual testing environments for validating SDI service deployments.

SELECTED PUBLICATIONS

Full list: [Google Scholar](#)

- [Reasoning About Human Values in GitHub Issues: What Can a Large Language Model Reveal?](#), IJHCI 2026
- [Understanding dynamics of polarization via multiagent social simulation](#), AI & Society, 2023
- [Pixie: Preference in implicit and explicit comparisons](#), ACL, 2022

AWARDS AND HONORS

- Graduate Student Leadership Award 2023 Awarded by NC State University
- Outstanding Teaching Assistant Award 2021 Awarded by NC State University

SKILLS

- Programming: Python, Java, Shell, SQL
- ML/AI: PyTorch, Tensorflow, Langchain, Huggingface, Scikit-learn, Gensim, Numpy, Pandas
- LLM & NLP: Multi-agent systems, representation learning, RAGs, LLM evaluation, text summarization

LEADERSHIP & SERVICE

- Reviewer: ACL, AAAI-ICWSM, ACM-TIST, IEEE-TCSS, JAIR, and JAMAS
- President and Head of Events for the Indian Graduate Student Association (IGSA), NCSU www.maitrincsu.org
- Organizer and Host for the AI in Society Webinar Series at NC State University Talks available [Online](#)
